

Password Sync

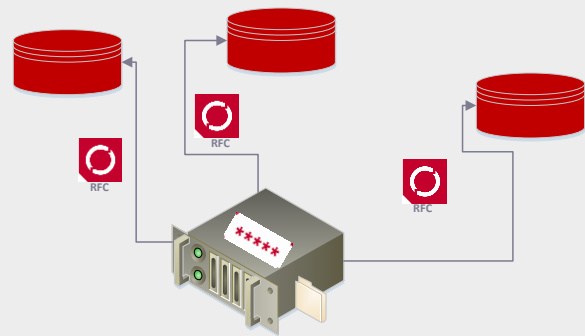

EASY PASSWORD SYNCHRONIZATION

End users appreciate being able to log onto different systems with a single user name and password. This single sign-on functionality doesn't just offer benefits in terms of user convenience, it also effectively closes security gaps. Security risks, e.g. due to users noting down passwords, are reduced. At the same time, there is less pressure on help desk staff who frequently receive numerous requests concerning forgotten passwords.

In spite of these benefits, it must be noted that the distribution and maintenance of passwords in the individual systems creates additional work in user administration. This work can be minimized with the consolut Password Sync add-on.

The consolut Password Sync tool lets you update expired or new passwords quickly and easily in all related systems and clients.

Once the systems with which the password is to be synchronized have been defined in the source system, updates are performed quickly, safely and with outstanding reliability and user convenience.

BENEFITS

- ▶ Passwords only need to be maintained in a single main client
- ▶ Fast synchronization via RFC connection with all connected systems and clients
- ▶ User-convenient password maintenance

OUR SKILLS

- ▶ Long-standing accounting experience gained in numerous projects and SAP® introductions
- ▶ Consultants with cross-specialty expertise
- ▶ Custom-made solutions for different authorization reporting requirements
- ▶ Continuous development of our programs
- ▶ Fast and cost-efficient implementation
- ▶ Advice and support beyond the end of the project
