## Transport Check

## “ NO STEPPING OUT OF LINE!”

### Task Definition:

The SAP system of GC-Gruppe consists of ten clients and more than 200 company codes; it is adapted by four different consulting companies and five internal staff members. A large number of client-dependent and -independent transports are generated and imported every day. Imports that were performed in the wrong order led to inconsistencies between the systems – the overtakers were usually only detected after they had been imported into the production system. Troubleshooting was done under great time pressure and required much work, as some of the orders in the quality assurance system were imported correctly. The internal staff had to invest a great deal of time to ensure appropriate quality control

### Solution:

GC-Gruppe decided to implement the consolut Transport Check.

**GC-GRUPPE**  
GROßHANDELS CONTOR

### Our Customer:

#### GC-Gruppe

On the map for more than 90 years: GC-Gruppe is an association of more than 100 wholesalers serving customers at over 800 locations all over Germany. As the German market leader in housing technology, GC-Gruppe offers services and innovative products in the fields of sanitary engineering, heating, air conditioning/ventilation, electric engineering, installation and roofing.

### Customer benefit:

#### Task:

GC-Gruppe was looking for a solution that would allow them to detect inconsistencies and problems resulting from "overtakers" before they were imported into the production system. The ultimate aim was to support and accelerate quality assurance.

#### Solution:

The consolut Transport Check is a simple and reliable tool that helps users identify dependencies between transport orders. The add-on can be easily integrated into the SAP standard in a matter of minutes.

## Transport Check

**GC-GRUPPE**  
GROßHANDELS CONTOR

### Implementation:

GC-Gruppe decided to install the consolut Transport Check. In just a few minutes, the tool was delivered to and installed in the SAP ERP system of GC-Gruppe – no further steps required.

The consolut Transport Check detects all interdependent transports – irrespective of the client – even if they are not immediately recognizable as such based on the short description in the transport queue.

The tool compares the content of transport orders to be imported. If two interdependent orders are imported in the correct order, or imported together in chronological order, the consolut Transport Check remains in the background. If an order is forgotten or skipped, it turns into an overtaker, and the system blocks the import of all interdependent orders. An error message is displayed that lists all overlapping objects together with the overtaken orders.

Initial tests by the internal SAP consultants of GC-Gruppe quickly revealed the effectiveness of the consolut Transport Check: no more analyzing transactions that become non-functional after being overwritten in the production system.

After a successful test phase, the consolut Transport Check was integrated into the production system.

### Result:

Since the go-live of the consolut Transport Check, GC-Gruppe has not experienced any inconsistencies between its systems. There are no errors in the production system due to transport overtakers. The internal SAP consultants spend much less time on the quality assurance of transport orders.

*"The consolut Transport Check has enabled us to import transports of many project members safely and without errors."*
